SECAM and our Movie Debut

The first quarter of 2019 has been very busy for SingMai with particular interest being shown in our video IP cores.

At the same time we completed the move to our new factory and have invested in some new test and production equipment which will allow us to expand our offerings throughout this coming year.

We have also made a short movie for Scottish Enterprise describing our involvement in a project to design an innovative CCTV camera.

We are now completing testing of SECAM encoding and decoding for our PT8 and PT5 video encoder and decoder IP cores. Please contact us for more information. Both the PT8 and PT5 now support all NTSC/PAL and SECAM standards including 960H. And with the PT51/PT55 IP cores we can also support the HD analogue video formats - a truly universal solution.
